ProofAgent business plan

Prototype-to-market plan: October 2026–March 2027. Proposed audience: small software teams and AI-agent developers who need reliable, reproducible repair-verification evidence.

> **Recommendation:** launch a bounded paid pilot only after live-model verification, traced recovery and the final demo. Sell inspectable evidence—not a claim of general software correctness.

What exists; what does not

Founder-reported: 21 passing tests, green Windows/Linux CI, verified neatlogs traces and Entire Graph integration. Live-model verification and final demo remain pending. No confirmed customers or revenue.

The inspected README still lists 18 tests and Entire setup as pending. Update those claims with current evidence. Public code covers three trusted billing fixtures, scripted offline replay and local unsigned checkpoints; it is not a sandbox for arbitrary customer code.

Three futures — all financial figures are assumptions

USD unless account count	Conservative	Base	Growth
Month 6 paying accounts	16	70	145
Month 6 monthly revenue	$704	$3,230	$7,325
Month 6 gross margin	24.7%	50.0%	53.8%
Month 6 recurring cost	$960	$2,046	$3,813
Month 6 net cash movement	$-256	$1,184	$3,512
Month 6 cash burn	$256	$0	$0
Month 6 break-even paid count	26	29	33
Six-month revenue	$1,433	$6,779	$14,961
Peak cumulative funding deficit	$3,003	$1,695	$1,463

Rounded summary. Operating break-even first occurs in Month 5 in Base and Month 4 in Growth; Conservative does not reach it. Counts use each month’s paid mix and free-user load; they are total required accounts, not additional accounts.

> **Runway: NOT CALCULATED.** No opening cash is assumed. Peak funding deficit is the maximum modeled cumulative shortfall, not runway or a safe funding target. Cash buffer, salaries and commitments must be assessed separately.

Received: $25 AWS infrastructure allowance, excluding Bedrock inference. It remains unapplied pending terms/expiry verification. The $20 model-credit key is unconfirmed and excluded. Applied offsets stay $0; recurring margins and break-even are unchanged. Base six-month cumulative cash movement is −$39.04 despite becoming monthly cash-positive.

Source: Rama Chandra’s project description and the public repository, reviewed 12 October 2026.

Editable assumptions

Costs and tier figures are provisional assumptions, not quotes or commitments. Credit status is founder-reported; the $25 allowance is confirmed received, not a cost assumption. Currency is provisional USD; prices exclude tax. Accounts are billed and collected in their signup month; costs are paid in the same month. No annual prepayment or overage revenue is assumed.

Monthly tiers and full-usage budget

Tier	Price	Evaluations	Support / account-month	Churn / month
Free evaluation	$0	10	0.01 hour	10%
Individual	$29	100	0.25 hour	5%
Team	$149	500	1 hour	5%

Team = one paying workspace, up to 5 seats, with a shared quota. An evaluation is one bounded verification job including attempted proposals. Model costs assume every active account uses its full quota. Enforce token, attempt and usage caps before taking paid workloads.

Recurring cost drivers and temporary credits

Assumption	Amount	Basis / limitation
Inference / evaluation	$0.060	Blended bounded-job budget; not a provider quote
Hosting / evaluation	$0.005	Execution allowance; must be measured
Observability / evaluation	$0.002	Trace allowance; cap retention
Storage / evaluation	$0.001	Evidence allowance; set retention
Support rate	$20/hour	Cash allowance, not founder salary
Fixed hosting / month	$40	Small deployment assumption
Fixed observability / month	$20	Baseline trace allowance
Fixed storage / month	$10	Baseline evidence allowance
Fixed support / month	$100	Plus per-account support time
Development / month	$300	Tools/contractor allowance, not a staffed lab
Marketing / month	$100	Community-first motion, not proven CAC
Administration / month	$30	Small recurring allowance
Founder cash pay / month	$0	Unpaid founder; opportunity cost excluded
AWS allowance received	$25	Founder-confirmed; approved infrastructure only; no Bedrock inference
AWS credit applied / month	$0	Unapplied: expiry and detailed terms unverified
Model-credit key (not received)	$20	Receipt unconfirmed; excluded from all offsets

Cost classification

Inference, hosting, observability, storage and support are delivery costs. Gross profit is revenue less those costs. Development, marketing and administration are operating expenses. The delivery categories already include their fixed baseline: never add it twice.

No salary, tax, legal setup, insurance, payment fee/failure, hiring or contingency is included. These exclusions make the budget a lean prototype cash plan, not a complete funded-company budget. Growth may require more fixed overhead.

Six months of cash movement

All projections below are assumption-derived, before temporary credits. A positive net movement is cash surplus; burn is the non-negative shortfall. Cumulative movement starts at zero only as a measurement reference, not an opening cash balance.

Base case — USD assumptions

Metric	Oct 26	Nov 26	Dec 26	Jan 27	Feb 27	Mar 27
Revenue	$0.00	$87.00	$410.00	$1,056.00	$1,996.00	$3,230.00
Inference	$12.00	$46.80	$133.80	$291.00	$511.20	$795.00
Hosting	$41.00	$43.90	$51.15	$64.25	$82.60	$106.25
Observability	$20.40	$21.56	$24.46	$29.70	$37.04	$46.50
Storage	$10.20	$10.78	$12.23	$14.85	$18.52	$23.25
Support	$104.00	$124.60	$181.60	$290.00	$444.40	$645.00
Delivery cost	$187.60	$247.64	$403.24	$689.80	$1,093.76	$1,616.00
Gross profit	$-187.60	$-160.64	$6.76	$366.20	$902.24	$1,614.00
Gross margin	N/A	-184.6%	1.6%	34.7%	45.2%	50.0%
Operating expenses	$430.00	$430.00	$430.00	$430.00	$430.00	$430.00
Recurring cost	$617.60	$677.64	$833.24	$1,119.80	$1,523.76	$2,046.00
Net cash movement	$-617.60	$-590.64	$-423.24	$-63.80	$472.24	$1,184.00
Monthly cash burn	$617.60	$590.64	$423.24	$63.80	$0.00	$0.00
Cumulative movement	$-617.60	$-1,208.24	$-1,631.48	$-1,695.28	$-1,223.04	$-39.04

Scenario revenue and monthly cash burn — USD assumptions

Scenario / metric	Oct 26	Nov 26	Dec 26	Jan 27	Feb 27	Mar 27
Conservative revenue	$0	$29	$87	$174	$439	$704
Conservative cash burn	$608.80	$603.92	$585.36	$547.84	$400.76	$256.32
Base revenue	$0	$87	$410	$1,056	$1,996	$3,230
Base cash burn	$617.60	$590.64	$423.24	$63.80	$0.00	$0.00
Growth revenue	$0	$174	$820	$2,232	$4,410	$7,325
Growth cash burn	$635.20	$581.28	$246.48	$0.00	$0.00	$0.00

Break-even is conditional on mix

Base Month 6: 60 Individual + 10 Team accounts, plus 225 Free accounts. Variable monthly contribution is $17.20 per Individual and $95 per Team; Free costs $0.88 per account-month. Including the $600 fixed delivery/operating baseline and current free-user cost gives 29 paid accounts at that mix, or 47 Individual-only / 9 Team-only.

Gross margin is undefined at zero revenue—not 0%. Base Month 6 is 49.969%, displayed as 50.0%. Credits do not improve recurring margin. All three scenarios keep the same fixed cost and churn assumptions; adoption is the scenario lever.

Earn the evidence; then the revenue

New-account additions below are hypothetical assumptions, not leads or traction. They are incremental accounts per tier, not conversions counted twice. Active accounts = prior active − rounded monthly churn + new additions. Opening customers are zero; Month 1 has no paid customers.

New accounts / month	Oct 26	Nov 26	Dec 26	Jan 27	Feb 27	Mar 27
Conservative / Free	10	15	20	20	25	30
Conservative / Individual	0	1	2	3	4	5
Conservative / Team	0	0	0	0	1	1
Base / Free	20	30	40	50	60	70
Base / Individual	0	3	6	12	18	24
Base / Team	0	0	1	2	3	4
Growth / Free	40	60	80	100	120	150
Growth / Individual	0	6	12	24	36	48
Growth / Team	0	0	2	5	8	12

Proposed roadmap — targets, not commitments

Month	Milestone
Oct / M1	Complete live evidence and demo; reconcile README; measure token/retry costs; interview 5–10 users (target assumption).
Nov / M2	Controlled design partners and paid Individual pilots after evidence gate; capture willingness to pay and support time.
Dec / M3	Test Team workflow; hard spend caps, privacy/retention and isolated execution before untrusted code.
Jan / M4	Bounded CI integration; measure repeat use, retention and independently curated false-accept/false-reject cases.
Feb / M5	Improve onboarding; validate team-sales motion and acquisition economics before scaling spend.
Mar / M6	Compare actuals with cases; revise price, scope, overhead and funding needs.

Go-to-market and evidence gates

Start through developer communities, agent-tool maintainers and hands-on design partners. Demonstrate an incorrect proposal rejected, then a verified repair and interruption recovery. Earn repeat use and paid willingness before calling this product-market fit. Independent testing, evidence exports and reliable recovery are the proposed differentiators; a durable moat is not established.

Runway inputs required

No unrestricted cash allocation or cash-balance date is confirmed. Opening cash and runway remain uncalculated by Rama’s direction. No additional unavoidable costs are confirmed; existing costs remain provisional. Verify the received AWS allowance’s eligible services and expiry before applying it. Do not count unconfirmed model credits or hoped-for funding as cash.

Checks: all six months/cases reconciled against adoption, tier revenue, delivery costs, margin and cash movement. Quarter flows sum; counts close; margins recompute. Doubling inference cost increased Conservative Month 6 burn from $256.32 to $459.72 with hosting unchanged; the original input was restored. Canvas rendered in light/dark; clicks remain untested. No financial accounts were connected.
